## I. QUESTION 11.9.1 (5)

Write the first five terms of the sequence whose  $n^{\text{th}}$  term is :  $x(n) = (-1)^{n-1} 5^{n+1}$ .

## II. SOLUTION

Parameter	Value	Description
$x(n)$	$(-1)^n 5^{n+2}$	General Term
$x(0)$	25	First term of G.P.
$r$	-5	Common ratio of G.P.

TABLE I  
GIVEN PARAMETERS

On substituting  $n = 0, 1, 2, 3$  and  $4$ , we get the first five terms

Hence, the required terms are 25, -125, 625, -3125, 15625.

The Z-transform of a sequence  $x(n)$  is given by:

$$x(n) = (-1)^n \cdot 5^{n+2} \cdot u(n) \quad (1)$$

$$X(Z) = \frac{25z}{z+5}; (|z| > 5) \quad (2)$$
